1. INTRODUCTION

The present document reports the average and statistical results obtained, regarding the answers provided to the assessment questionnaires on the knowledge of renewable energy and sustainability, by all participants in the E @ S Project.

In January 2018, a questionnaire was proposed, which, aimed at primary and secondary school students from the various participating countries, could help to provide useful indications to understand what the real training needs perceived on the theme of Environmental Education and Sustainable Development.

The questionnaire was proposed for the compilation, at the end of January, for an initial EX-ANTE evaluation and determination of the level of knowledge and where, possibly intervening with the training, and at the end of May, for an EX-POST evaluation, in order to highlight any growth in terms of knowledge and preparation.

The questionnaire is addressed to both Primary and Secondary Schools and it deals with four different sections:

- 1) ENERGY SOURCES;
- 2) ENERGY EFFICIENCY;
- 3) RENEWABLE ENERGY;
- 4) MOBILITY.

The questions and their possible answers are organized in different tables, where they are visible and comparable, the percentages of answers to each question and their possible answers for each country.

The tables show the percentage response to each question, obtained by dividing the number of students who answered for the total number of students of the same country, to whom the questionnaire was proposed.

It was not possible to calculate the incidence of the response rate to each country's application, compared to the total number of students from the eight participating European countries, because each of them chose to adopt different evaluation principles, producing results that are not comparable between of them, despite having been indicated differently from the beginning.

In detail:

- PP1: Questionnaire, ex ante and ex post, proposed only to JEG's of a primary school (39 JEG's) and a secondary school (77 JEG's);
- PP3: Questionnaire, ex ante and ex post, proposed to JEG's of a single class of a primary school (7 JEG's) and six classes of secondary schools (49 JEG's);
- PP5: Questionnaire, ex ante and ex post, proposed only to JEG's of five Primary school classes (38 JEG's);
- PP7: Questionnaire, ex ante, proposed to all students of four primary schools (1565 students) and to all students of a secondary school (481 students);
- PP8: Questionnaire, ex ante and ex post, proposed to all students of two primary schools (232 students);
- PP9: Questionnaire, ex ante, proposed only to JEG's of four secondary schools (74 JEG's);
- PP10: Questionnaire, ex ante, proposed only to JEG's of eight primary schools (111 JEG's) and six secondary schools (103 JEG's);
- PP12: Questionnaire, ex ante and ex post, proposed to JEG's and some students of seven primary schools (166 students).
