

OUTPUT FACT SHEET

Tools

Project index number and acronym	CE 1373 - PROSPECT2030
Output number and title	O.T3.1 Online training package
Responsible partner (PP name and number)	MAE Mazovia Energy Agency - PP3
Project website	https://www.interreg-central.eu/Content.Node/PROSPECT2030.html
Delivery date	Oct 2021

Summary description of the key features of the tool (developed and/or implemented) and of its transnational added value

PROSPECT2030 partnership worked on the design of the training package containing all the materials prepared for 5 Capacity Building workshops, 19 Peer to Peer sessions and 7 Replication workshops, weighing different options that could better suit the target groups. The aim was to keep the access to all the available materials easy and intuitive by creating an interactive organisation of the documents which includes several videos to prompt visitors to explore and make use of the training package. For this reason the project finalised the package on a dedicated section of the project website directly accessible from the homepage. The huge amount of materials is divided into 7 sections: Energy planning and energy transition; Energy efficiency in buildings; Financing energy efficiency; Sustainable transport; Renewable energy systems; Energy grids and infrastructures; Stakeholders engagement and the role of consumers. Each topic brings the viewer to a dedicated page listing all capacity building and mutual learning materials (presentations, video recordings) that fit into the relative category. The user will be able to download presentations and watch recorded sessions on the YouTube project channel. They all include a video-introduction prepared by partners and a collection of training presentations, recordings and other documents. The training package was born thanks to the mutual transnational exchange of knowledge and the sharing of experiences between the partners which took place during the implementation of the project. Furthermore, to increase the added value, numerous external experts were invited as speakers to the workshops organised as part of the training activity. The replication partners were invited to exploit the training package and it was disseminated during events and through the project newsletters.

NUTS region(s) where the tool has been developed and/or implemented (relevant NUTS level)

Burgenland - Eco Energyland (AT),
Friuli Venezia Giulia (IT),
Mazovia (PL),
Piemonte (IT),
Saxony-Anhalt (DE),
Split-Dalmatia (HR),
Southern Great Plain (HU)

Expected impact and benefits of the tool for the concerned territories and target groups

The online training package was developed to organise and make available to stakeholders the documentation and materials developed during the mutual learning activities organised by the project. In this way the experiences and best practices acquired by each partner in their own territory was made easily available and transferred to all the other partners and territories of the Consortium. They can therefore benefit from the training contents to increase their knowledge and draft ideas to implement new policies and new activities with positive and durable effects on the whole area affected by the project.

Sustainability of the tool and its transferability to other territories and stakeholders

The online training package was enriched by the materials prepared and the contributions available thanks to the transnational exchange of experience and expertise made during the replication process. The exploitation of all this documentation by the 12 external partners and the stakeholders who participated in the replication program will ensure the dissemination and replication of the teachings and best practices of PROSPECT2030 in other territories than those directly involved in the project. The choice of a training package publicly available on the project website, and its easy and interactive consultation mean that an even wider audience can be reached over time and can benefit from the information provided. In this way the project will multiply its effects in a medium-long term perspective and will contribute to influence the structure of the existing public fund legislation framework in the Central Europe area.
