Mid Term Review + 4th Project Meeting

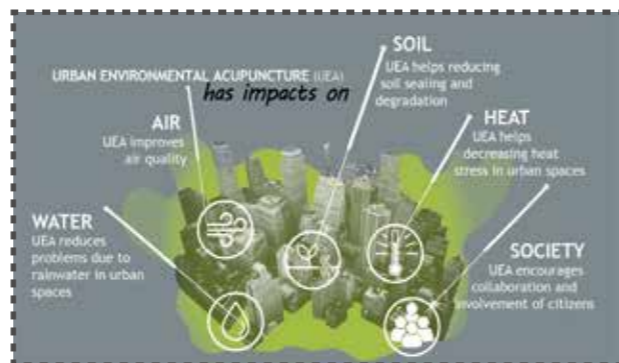

The Fourth Project Meeting and Mid Term review took place in a virtual meeting attended by the JS in 17.12.2020.

All WP leaders presented the development of their work packages, outlining some common difficulties in the organization of events. This brought to some changes and small delays in some activities. In particular, this was decided for training activities in order to facilitate the reaching of a larger number of people.

An additional project meeting took place online on 01 March 2021. Still limited by the COVID-19 pandemic, the meeting switched to a tele-conference. However, SALUTE4CE team is going on on its goal for a better, green, healthy and sustainable future.

SALUTE4CE

Activities held in this 4th period are also visible on our videos (check our website www.interreg-central.eu/SALUTE4CE).

The first is a visual documentation of the involvement of children and their teachers in the implementation of a Grandmama Garden in a school of the City of Liptovský Mikuláš (SK).

The second is the project description presented at Climathon event in Turin (IT), in November 2020.

Due to COVID-19 pandemic, the training activity has shifted to the 5th reporting period, together with the preparation of the Action Plan.

Nevertheless, project partners prepared all the necessary material for training implementation, with translation in national language and first activity was held in February 2021 online (for Liptovský Mikuláš), providing the very important following **feedback on lesson learnt**:

- Use appropriate online platform. If you have more than 10 participants, divide them into groups (this is possible on ZOOM platform);
- Have enough time to check connectivity and explain the participants how to use video and microphone, how to participate on online debate etc.;
- At the beginning of the online training, the participants should be shortly acquainted with the general goals of the project to have some overall look with the connection to their locality;
- It is good to explain and describe the individual NBS and their functions with specific examples (it is very useful to use online videos on Youtube);
- Discussion on „virtual city“ is easier when participants background and opinions are not known. They will learn about the topic and later discuss concrete spots in more detail;
- Have enough time for closing discussion to answer all participant questions;
- Online trainings are demanding, we recommend to have breaks after 2 hours.

The e-Learning manual is now available

E-learning aims to bring the issue of **urban green acupuncture** to as many people as possible. Its task is to provide important and key information about the forms and methods of implementation of urban green acupuncture in a time-acceptable form.

E-learning is designed to be accessible to a wide range of people, environmental experts, urban planners, landowner architects, other professions or their students. E-learning is designed to be available to as many users as possible, to avoid the needs for special technology or software's, and to provide feedback. To increase interest, people taking the course will be given the opportunity to take a final assessment test which, if passed, will release the informal title of "urban green acupuncture specialist".

You can download it from our website.
