Information for potential partners

Mission

Help people start a new life as software developers

Vision

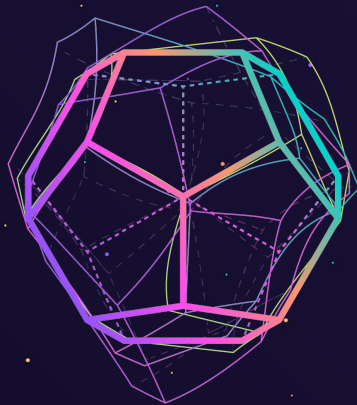

Be the number one choice for high
quality programming education

What we do - use cases

1. Train newcomers
2. Reskill your employees
3. Train Senior Developers

Training for newcomers

Program Overview

PROGRAMMING

SOFT SKILLS

COMMUNITY

Our program: 9 months, full-time

Program Overview

PROGRAMMING

Foundations

Object oriented programming with Java 11, Linux, Git, GitHub and IntelliJ

Specialization

Backend with Spring Boot or frontend with HTML, CSS, Javascript and Angular

Final Project

SOFT SKILLS

Time Management

Communication Skills

Working in multicultural teams

Learning how to learn

COMMUNITY

Events

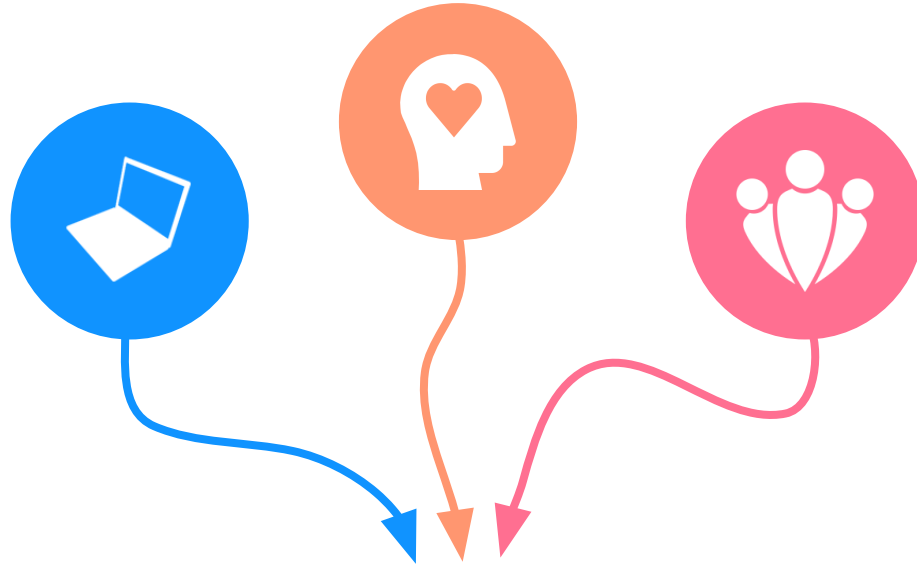

Employability Day
Hackathon
Final ceremony

Get together

Christmas dinner
Alumni exchange
Hikes

Program

Program Overview

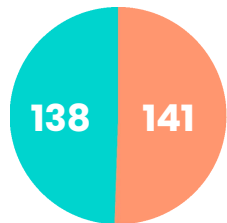

Our Achievements

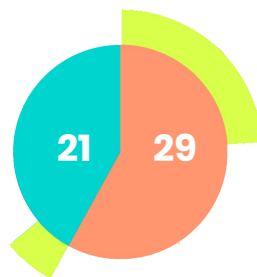

● Class of 2018

● Class of 2019

~ 70% found a job

279 applicants

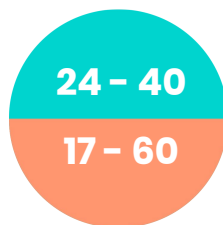

50 participants

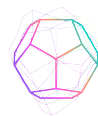

● 28% female

German level A2 - C2

Age range 17 - 60

What others say

**Benjamin
Mörzinger**
TU Wien

“As someone who has been fortunate enough to be able to work with graduates of the program for more than one and a half years, I can only recommend that you seek out these talents as quickly as possible. The exceptional motivation and willingness to work, coupled with the good basic technical trainings has allowed them to prove themselves in our industrial and research projects several times.”

**Roland
Maurer**
CTO, Tiani Spirit

“The program is a very good initiative to bring together unemployed people and companies that are actually looking for employees. The coding school is trying to train selected unemployed people so that they are able to start a career as software developer.”

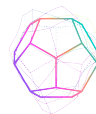

**Imad
Khchifati**
Participant

“Here I learned the basics of coding. Afterwards I got myself an internship in TU Wien and since a month I am working at the TU Wien. It was very important to me to find a job because now i feel comfortable in society and feel like i am a productive part of it.”

Companies who hired graduates and alumni

Current Programme

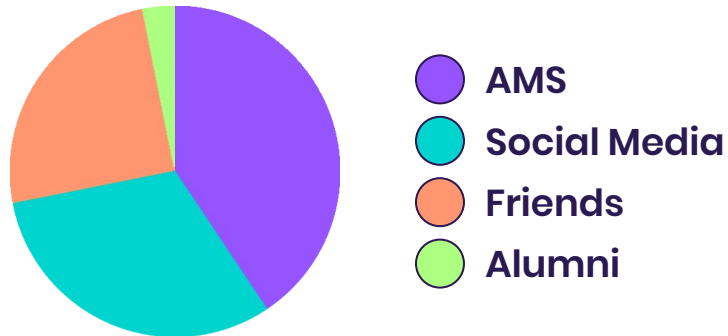

480+ applicants

36 participants (45% female)

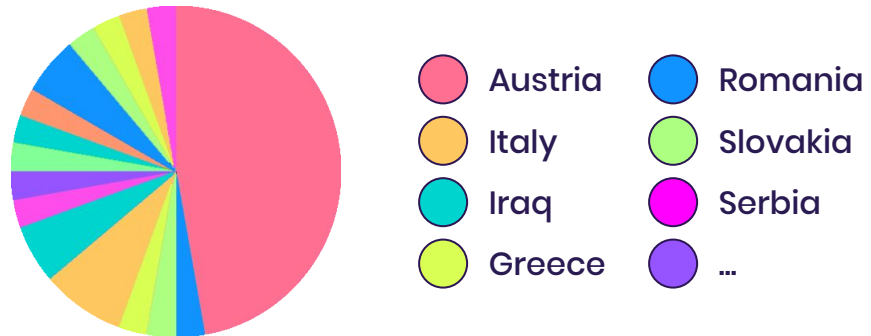

Age range 21 - 50

German level A2 - C2

Examples for collaboration

Workshop

An expert from your company comes to us and gives a workshop. It should be interactive and a chance to get to know our participants as well as a chance to develop for the employee. (Learning through teaching.)

Potential topics: Linux, GitHub, Testing, Maven / Gradle, Scrum, Kanban, Continuous Delivery, Docker

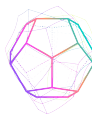

Projects

During the last six weeks of the program our participants are working in groups using agile methods (Scrum). Your company will provide support from an experienced Team Leader, Scrum Master or Product Owner for the time of the projects. (Time investment needed: 2 full days plus ~4h per week.)

Company Visits

We come to visit you at your office.

After a tour, the participants have the chance to ask questions to developers.

Examples for collaboration

Employability Day

Our participants present projects they worked on. Hosted by Microsoft Austria and followed by a group exercise and time for one-on-one interviews. This is the chance for you to meet many of our participants in just one day.

Mentoring

Thursday afternoon is mentor time. Experienced developers come by and support our participants in solving the exercises of the week.
