# 1. OVERVIEW OF SULPITER PROJECT

SULPITER (Sustainable Urban Logistics Planning to Enhance Regional freight Transport) supports policy makers in improving their understanding of FUAs freight phenomena in an energy and environmental perspective.

The project enhances their capacity in urban freight mobility planning in order to develop and adopt sustainable urban logistics plans (SULPs). Policy makers in Bologna, Budapest, Poznan, Brescia, Stuttgart, Maribor and Rijeka have been engaging in the last 3 years, with local, regional and national non-partner authorities and technical partners to analyse freight transport policies and identify measures to be implemented by the respective FUAs.

## 2. SULPiTER ENLARGED TRANSFER PROGRAMME (ETP)

SULPiTER developed an Enlarged Transfer Programme (ETP) to train up to 20 non-partner authorities working on freight transport and logistics in Functional Urban Areas (FUAs) to improve their understanding and skills in policy making for urban energy efficient freight in a mutual learning process.

The participants who enrolled in the ETP came from Italy, Germany, Poland, Slovenia, Greece, Portugal and Hungary.

The training programme consisted of 2 virtual meetings, 2 webinars and one extra training session offered during the SULPiTER Final Conference. During the trainings, participants committed to drafting an action plan as a basis for the future elaboration of their own Sulp., which were presented during the SULPiTER Final Conference in Bologna on 14 May.

The best Action Plan in urban freight mobility planning was symbolically conferred the SULPiTER award at the final award ceremony.

## 2. SULPiTER ENLARGED TRANSFER PROGRAMME (ETP)

The 1st webinar of the ETP provides a general introduction to the project with the aim to give the tools, methodologies and resources to understand freight transport & logistics impacts in CE FUAs; foster the tool application outside the SULPiTER partnership and improve skills of policy makers of CE in assessing FUAs freight transport needs; identify challenges, approaches and strategies for urban freight mobility planning in FUAs to contribute to the definition of long term strategies.

The 2nd webinar of the ETP introduces the basic tools, methodologies, and training resources regarding the development of human resources skills in FUAs mobility planning, transnational cooperation platform and education model for FUA freight mobility planning and the template for the development of a Sulp document based on the EC ELTIS guidelines.

### 3. SULPITER AWARD

The SULPITER Award has been attributed to **Maria Matusiewicz** from the University of Gdansk on 14 May 2019 for the best action plan for the development of a Sulp based on SULPiTER methodology!

### 4. FINAL CONFERENCE

After three years of research, transnational and comparative studies, the SULPiTER team met in Bologna from 13-15 May 2019 for its final event. Launched in June 2016 with a budget of almost 2.5 million euros, SULPiTER - an acronym for Sustainable Urban Logistics Planning for the Improvement of regional freight transport - has placed itself at the service of Public Administrations to develop and adopt sustainable urban logistics plans (SULPs). The challenge was to approach the themes and problems common to the participating cities in a transnational perspective. The project examined issues such as the increase in the intensity and fragmentation of the freight transport flow, the significant increase in traffic in logistics and multimodal nodes, the conflicting relationship between passenger mobility and freight transport.
